

PGP 2026-28: Decision Sciences II

Case Study Assignment: GoodBelly

<u>Case Study Deadline:</u>	October 6 th @ 9:00AM IST (no extensions will be granted).
<u>Groups:</u>	Groups of 5 members as decided by PGP Office.
<u>Peer Evaluation:</u>	Fill out the enclosed peer evaluation form, and submit separately in class, at the end of the case study submission deadline.

Case Study Deliverables:

One professionally written case study report per group, inclusive of the following:

1. A cover page, with project title, names of team members, *etc.*
2. One-page *executive summary*, highlighting main features of your analysis, modeling, and comments on results obtained.
3. Main case study report, not exceeding *fifteen* one-sided pages, including a succinct understanding of the problem, regression models, graphical representations (residual plots, P-P plots, etc.), results, and conclusions. Specific recommendations for the different questions listed below must also be included in the report. Total case study report not to exceed *twenty-five* one-sided pages.
4. Put all your case study material (including case study report, MS Excel/JASP files, and any other supplementary files) into a “Group #.zip” folder and submit on the course website (Moodle) before the deadline. The system will not accept late submissions and no submissions will be accepted over email, late or otherwise. *One soft copy submission per group is required.*
5. *The peer evaluation form must be completed individually* and submitted online prior to the deadline.

Case Study Questions

In your case analysis, you are required to address the questions below. Clearly show all your workings clearly. Note that these questions are to be used as “pointers” for your analysis, and do not capture all the requirements. These are necessary but not sufficient conditions, and projects that go above and beyond these minimum requirements will receive extra credit.

1. Build a statistical model to explain the relationship between sales and promotional efforts. What do you observe in the model? Explain your findings.
2. Can you ensure that your model developed in part (1) satisfies all the assumptions of linear regression? What additional analysis needs to be done to verify the correctness of the model?
3. Does the in-store demo program boost sales? If so, for how long does the “sales lift” last?
4. Does placement of the product within the store affect sales?
5. Are there any suggestions to improve and refine the model?
6. Based on your overall analysis, what are your managerial implications and recommendations to GoodBelly’s management?
